

INTERCONNECTS

CLEANER AND QUIETER SO YOU CAN HEAR MORE MUSIC

The Wireworld Series 6 audio interconnect cables described on this page are a rare example of new technology that clearly and objectively advances the art of music reproduction. One of their most obvious advantages is that they sound distinctly cleaner than other cables, especially on vocal sibilance. They also allow quieter details to be heard, while preserving a greater range of dynamic contrasts and musical expression than other cables. Amazingly, they even reduce listening fatigue while improving definition and image focus. No other cables sound as close to the ultimate sonic purity of a direct connection.

Platinum Eclipse and the other Series 6 inter-connects utilize Wireworld's new Composilex® technology, which makes striking improvements in sound quality by virtually eliminating the noise modulation distortion generated by conventional insulation materials. Composilex provides quieter backgrounds, tighter image focus and wider dynamics than would be possible with the insulation materials used in other cables.

Composilex is only part of the specialized DNA Helix® cable design, which uses a stacked array of four flat conductors to neutralize the electromagnetic loss that filters the signal in other cables. These extraordinary cables are also available in subwoofer, multi-channel and tonearm configurations. The Solstice, Luna and Terra interconnects utilize a simpler version of the DNA design to save cost. The combination of these exclusive technologies, with Wireworld's superior connectors, materials and workmanship, produces the highest fidelity and best value in cables.

Platinum Eclipse™
PEI

DNA Helix design, 17ga. Ohno Continuous Cast® solid silver conductors, carbon fiber plugs, silver-clad OFC contacts

Gold Eclipse™ 6
GEI

DNA Helix design, 19ga. OCC solid silver conductors, machined aluminum plugs, silver-clad tubular OFC contacts

Silver Eclipse™ 6
SEI

DNA Helix design, 19ga. OCC silver-clad copper conductors, machined aluminum plugs, silver-clad tubular OFC contacts

Eclipse™ 6
ECI

DNA Helix design, 19ga. OCC copper conductors, machined aluminum plugs, silver-clad tubular OFC contacts

Equinox®
EQI

DNA Helix design, 21ga. OCC copper conductors, machined aluminum plugs, silver-clad tubular OFC contacts CL2/FT2

Oasis® 6
OAI

DNA Helix design, 21ga. oxygen-free copper conductors, machined aluminum plugs, silver-clad tubular OFC contacts CL2/FT2

Solstice® 6
SOI

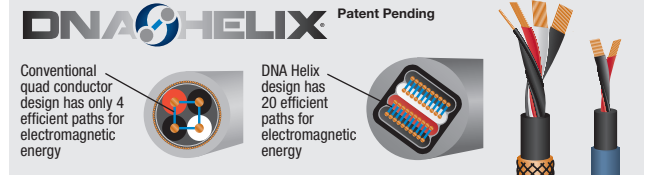

DNA Helix design, 24ga. silver-plated OFC conductors, machined aluminum plugs, silver/gold-plated tubular OFC contacts CL2/FT2

Luna™ 6
LUI

DNA Helix design, 24ga. OFC conductors, machined aluminum plugs, silver/gold-plated tubular OFC contacts CL2/FT2

Terra™ 6
TEI

Flat DNA design, 25ga. OFC conductors, molded plugs, silver/gold-plated tubular OFC contacts CL2/FT2

Equinox Mini Jack 6
EQM

DNA Helix design, OCC copper conductors, machined aluminum plugs, silver-clad OFC contacts

Oasis Mini Jack 6
OAM

DNA Helix design, oxygen-free copper conductors, machined aluminum plugs, silver-clad OFC contacts

iWorld™
IPA

Coaxial design, oxygen-free copper conductors, molded plugs, 24k gold-plated contacts

All models are available with balanced XLR terminations
